Practice garden comes into bloom

At your next visit to the practice I hope you will notice a big change in our back garden. Our new gardener has done a fantastic job of rejuvenating the lawn and flower beds. He has also included features which will encourage insects and wildlife to flourish.

We have always strived to make your ‘visit to the dentist’ as relaxing and comfortable as possible and we hope that enjoying the view from the patio doors on a sunny day will go some way to accomplishing this!

Shocking News!

We have bought an expensive piece of equipment for the practice which we hope we will never need to use!

The item is called an AED (automated external defibrillator). The machine can deliver a measured electric shock to the heart when someone is having a cardiac arrest (which is why we hope we never have to use it outside of a training session).

Sudden cardiac arrest occurs because the electrical rhythm that controls the heart is replaced by a chaotic disorganised electrical rhythm called ventricular fibrillation. The shock from the AED restores the heart’s normal rhythm.

When someone goes into cardiac arrest, every minute without CPR and defibrillation reduces their chances of survival by 10%. Being so close to the High Street means that we may even be able help with an emergency in our wider community.

Summer 2014
